Hill's breakthrough technologies

ActivBiome+ Technology

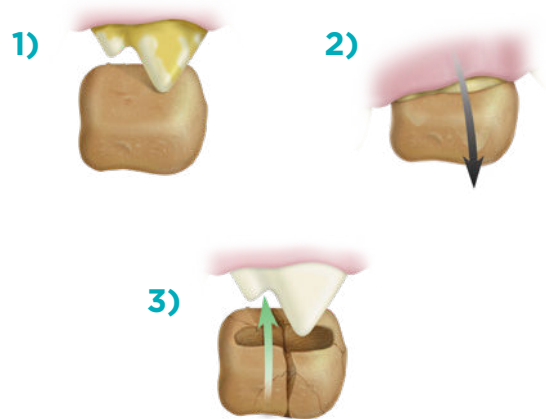

The gut microbiome is the ecosystem in the gastrointestinal tract containing billions of various microorganisms - including both desirable and undesirable bacteria. Groundbreaking new science highlights the critical role a pet's gut microbiome can play in response to digestive issues and also in determining their overall well-being.

Hill's ActivBiome+ Technology is a revolutionary blend of fibres that works synergistically to nourish the pet's gut microbiome.

Dental Kibble Technology

Hill's Dental Kibble Technology works like a toothbrush to help reduce plaque and tartar buildup keeping teeth clean and breath fresh.

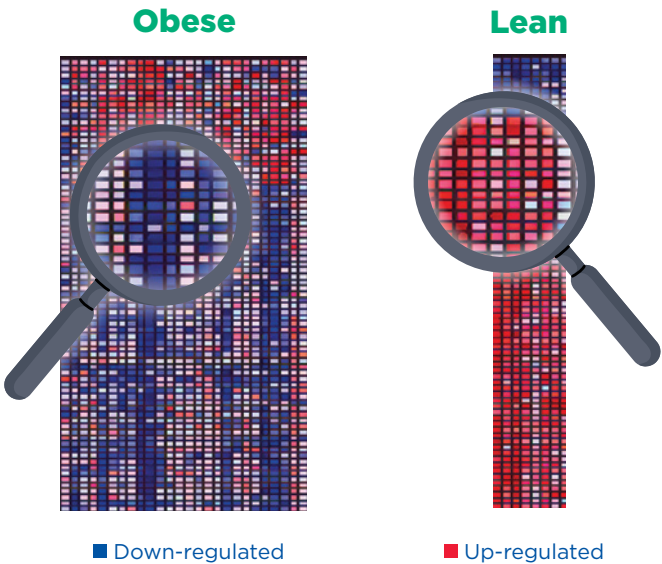

Weight-management Technology

Hill's Vet Essentials Multi-Benefit + Weight dry foods support overweight pets' biological functions to help them burn fat, like lean pets, instead of storing it.

Our science-led technology naturally works with your pet's unique energy use for easy and effective weight loss. It also helps kick-start the body's natural ability to burn excess fat, while helping them feel full and satisfied between meals. Our blend of antioxidants and omega-3 fatty acids help reduce inflammation to help keep your pet healthy.

Obese and lean pets have different gene expression. Obese pets are Fat-Storers. Lean pets are Fat-Burners.

We trust science to transform lives

Led by science and loved by pets

All Hill's foods are developed by a team of veterinarians, PhD nutritionists and food scientists.

Home to our #1 taste testers

Our global Pet Nutrition Centre is where our 900+ dogs and cats help us develop forward-thinking food — so your pet has the best nutrients for their best life.

Food, shelter & love

Hill's Food, Shelter & Love programme provides food to shelters and has helped over 12 million shelter pets and counting find a forever home.

We're working to build a more sustainable future

As our company has grown, so has our commitment to sustainability and making a positive impact in everything we do.

Responsibly Made
